

TECHNICAL BULLETIN

FOLIAR NUTRITION

NOMAAD is a professional use liquid supplement offering turf managers advanced foliar nutrition.

Features

- Liquid concentrate of L-amino acids and peptides
- Highly available organic nitrogen
- Complete amino acids profile (18 amino acids)
- For use on greens and tees and fairway
- Application : Spring, summer and fall

Modes of action and benefits

- Overcomes limiting factor of protein synthesis during stress periods by providing a complete pool of free amino acids that can be used directly by the plant.
- Provides specific osmolytes such as proline and hydroxyproline that help to stabilize enzymes activity and protect membrane integrity during osmotic stresses.
- Provides key intermediary amino acids such as glutamic acid involved in several metabolic pathways essential to nitrogen assimilation.
- Optimizes plant energy during nitrogen assimilation and protein turnover
- Stimulates chlorophyll synthesis and enhance colour.
- Helps to recover from damages and stresses
- Improves global turf quality and playability

Directions for use

Turf (green, tees and fairways) : 100 to 120 ml / 100 m²

Water volume : 4 to 8 L / 100 m²

Frequency : Every 14 to 21 days from spring to fall

Apply in a sufficient volume of water to insure even coverage. NOMAAD is compatible with most professional turf product. Always conduct a compatibility jar test and check the dilution rates before mixing NOMAAD with new products. This product should be used inside a complete fertilization program. Consult an agricultural representative for specific use. Shake well before use.

Guaranteed minimum analysis

Total nitrogen (N) : 5 %

Active ingredients derived from 2019172F *Fertilizers act* and fish emulsion.
