

Dry Seed Dressing Biological Inoculum

THE BENEFITS OF BIOLOGY

THE RESULTS OF BIOLOGY

Every season brings its own challenges and getting seeds off to the best start provides better take and resilience over time. EcoTea™ Dry and Liquid Seed Dressings bring full spectrum biology for your seeding success this season.

With a wide range of proven benefits our proprietary biological/biostimulant blends provide a format to meet your needs that work in your turf management program.

EcoTea™ Dry Seed Dressing

Our full spectrum biology as a micronized powder is the perfect choice for overseeding everything from greens to sports fields. Blending the recipe of Part A and B you are combining the power our biodiversity with the additional support of microbial enhancing food sources.

By adding such a wide range of organisms directly on your seed, the benefits extend from the time the root emerges through any difficult seasonal conditions. Our products contain microbes in all major function groups providing a complex web of interactions to support crops and soil quality. EcoTea™ Dry Seed Dressing can benefit your course and field management program by giving your growing turf grasses the biodiversity they need.

The research is catching up with our results. Check our website for details around trial data on a growing range of crops and regions.

Improve Soil Structure - Promotes Plant Root Growth

Instructions for 2.4 L Kit:

1. Mix Part A & B of the EcoTea™ Dry Seed Dressing kit together in packaging OR equivalent mixing bag/bucket.
2. Pour 125 lbs of turf seed in box seeder (or appropriate mixing vessel).
3. Pour HALF of the mixed 2.4 L EcoTea™ Dry Seed Dressing kit over seed.
4. Mix by hand to achieve good coverage.
5. Pour in another 125 lbs of turf seed and other half of the mixed 2.4 L EcoTea™ Dry Seed Dressing kit (or set other half of product aside for second 100 lb load).
6. Mix by hand to achieve good coverage.
7. REPEAT until all seed and EcoTea™ Dry Seed Dressing kit has been added to the box seeder.

Note: If seeding less than 250 lbs of turf seed, simply ration Part A & Part B in halves and only mix half of each part for 125 lbs of turf seed to keep shelf life. If Part A & B stay separate shelf life remains.

Shelf Life:

Prior to mixing Part A & Part B, the product has an 18 month shelf life from manufacturer label. Provided the containers remain closed, kept out of direct sunlight and maintained at a temperature below +20 degree Celsius.

Once Part A & Part B are mixed, applied to the seed there is a 10 day maximum recommended shelf life. Absolute maximum time after product is applied to seed is 15 days (not recommended). Mix as fresh as possible.

Safety Disclaimer:

EcoTea™ Dry Seed Dressing is completely safe to handle and is approved for organic production. We recommend wearing a mask when mixing Parts A & B, as they are fine powders. Safe around kids and pets. No chemicals or waste products used.

Storage:

Store unopened product in a cool dark environment. Do not let product freeze.

Uplands Golf Course, Victoria, BC. EcoTea™ application on a USGA spec green vs. a push up green.
